Software Engineer

Frontend focused software engineer with 5+ years of experience building data-driven web applications in enterprise fintech environments. Experienced developing complex user-facing workflows, integrating APIs, and collaborating across product, design, and backend teams to deliver reliable production software. Strong background in React, Angular, TypeScript, JavaScript, and modern frontend architecture with a focus on maintainability, performance, and responsive user experiences.

Technical Skills

Frontend: React, Angular, TypeScript, JavaScript (ES6+), HTML5, CSS3 | **Backend:** Node.js, Express, REST APIs, JWT |

Data: PostgreSQL, SQL, JSON | **Testing:** Jest, Supertest | **Tools:** Git, Azure DevOps, Jira, Agile

Professional Experience

InvestCloud — Los Angeles, CA

Senior Frontend Engineer

Sep 2024 – Mar 2026

- Owned frontend implementation for goal-based planning features across applications serving financial advisors, clients, and prospective customers.
- Built reusable UI components and complex data-driven workflows integrating backend APIs and asynchronous financial data.
- Collaborated with backend engineers, designers, and product stakeholders to deliver production features and resolve cross-system integration issues.
- Improved application reliability and maintainability through component architecture, defensive data handling, responsive design, and cross-browser testing.

Frontend Developer

Feb 2020 – Sep 2024

- Led frontend implementation of a goal-based financial planning platform for Ameriprise Financial, later expanded to support two additional institutional clients.
- Built responsive, data-intensive interfaces using Angular and JavaScript within a configurable multi-client platform.
- Served as a frontend/backend liaison for integrations involving authentication, financial data mapping, APIs, and client workflows.
- Supported multiple client go-lives as part of a 10-person engineering team, troubleshooting production issues and delivering iterative fixes.

Projects

Project Horizon | Angular, TypeScript, Node, Express, PostgreSQL |

projecthorizon.app

- Full-stack climbing tracker for logging sessions, tracking progress, and reflecting on training over time.
- Designed REST APIs and relational data models for authentication and user-scoped workout data.
- Built a responsive Angular UI using Reactive Forms, RxJS, reusable components, and service-based API integration; added automated API testing with Jest and Supertest.

MLB Stats Data Visualization App | React |

live-mlb-dashboard.vercel.app

- Baseball dashboard for following live games, standings, player stats, probable pitchers, and league leaders in one place.
- Integrated live MLB APIs with asynchronous polling, dynamic state, reusable components, and responsive layouts.

Education

Software Engineering Immersive — General Assembly, Los Angeles

B.A. English — University of California, Santa Barbara

Volunteer Experience

Head Coach — City of Los Angeles Parks and Recreation

2023 – 2026

- Led youth baseball and soccer teams, focusing on player development, communication, and team strategy.
