Senior Frontend Engineer

Frontend focused software engineer with 5+ years of experience building data-driven web applications in enterprise fintech environments. Experienced developing complex user-facing workflows, integrating APIs, and collaborating across product, design, and backend teams to deliver reliable production software. Strong background in React, Angular, TypeScript, JavaScript, and modern frontend architecture with a focus on maintainability, performance, and responsive user experiences.

Technical Skills

Frontend: React, Angular, TypeScript, JavaScript (ES6+), Vue, HTML5, CSS3

Data & APIs: REST APIs, JSON, Async Data Workflows, Client-Side State Management

UI/UX: Responsive Design, Accessibility, Cross-Browser Compatibility, Component Architecture

Tools & Platforms: Git, Azure DevOps, Jira, CI/CD, Agile Development

Additional: ChatGPT, Claude, Copilot

Professional Experience

Senior Frontend Engineer — InvestCloud, Los Angeles, CA

Sep 2024 – Mar 2026

- Led frontend development across enterprise financial planning applications used by institutional clients.
- Built reusable UI systems and workflow-driven features supporting complex financial data and client interactions.
- Collaborated closely with backend engineers, designers, and product stakeholders to deliver production-ready features in agile development cycles.
- Improved application reliability and maintainability through clean component architecture, defensive data handling, and cross-browser testing.
- Worked directly with API integrations and asynchronous data workflows supporting financial planning and reporting features.
- Diagnosed and resolved frontend/backend integration issues impacting client-facing workflows.

Frontend Developer — InvestCloud, Los Angeles, CA

Feb 2020 – Sep 2024

- Led frontend implementation for a goal-based financial planning platform developed for Ameriprise Financial.
- Contributed to a multi-tenant white-label platform architecture supporting customization across multiple financial institutions.
- Served as a liaison between frontend and backend teams during integration efforts involving authentication, financial data mapping, and client workflows.
- Built responsive, data-intensive interfaces using Angular and modern JavaScript patterns.
- Participated in iterative feature delivery, debugging, QA support, and production issue resolution in a fast-paced enterprise environment.

Additional Experience

Adwords Account Manager — CPC Search, San Francisco, CA

Aug 2013 – Feb 2017

Emergency Room Tech — Huntington Hospital, Pasadena, CA

Dec 2016 – Feb 2018

Trauma Tech — Scripps Memorial Hospital, La Jolla, CA

Mar 2013 – Feb 2017

Projects

MLB Stats Data Visualization App

live-mlb-dashboard.vercel.app/

- Built a real-time sports data platform using React and the MLB Stats API.
- Implemented live game updates, asynchronous polling workflows, and dynamic client-side state management.

- Designed reusable component architecture and data fetching workflows with periodic polling and error handling.
- Focused on responsive UX, maintainable frontend patterns, and scalable data transformation for live sports visualization.

Interactive Guitar Fretboard Visualization App

jyandell83.github.io/guit-guide/

- Built a React application for interactive guitar fretboard visualization.
- Implemented dynamic scale and key mapping with real-time updates based on user input.
- Designed flexible logic supporting alternate tunings and multi-string configurations.
- Focused on performance and clean UI rendering for complex visual data.

Education

Software Engineering Immersive — General Assembly

B.A. English — University of California, Santa Barbara

Volunteer Experience

Head Coach — City of Los Angeles Parks and Recreation

Mar 2023 – Present

- Leading team development, communication, and game strategy for youth baseball and soccer programs.
- Mentoring players and adapting coaching approaches to individual needs.
